

Report

The website is titled "Muharraaq Visiting Sites"; as the title indicates, the website will highlight some sites in the city of Muharraaq that are worth visiting. There is no specific category that gathers these sites together. But all of them are outdoorsy and good to walk in. In this website, I try to make it a fluid design as much as possible, but in some parts, the design is responsive. I used W3School as my resource for inspiration and tutorials. W3School offers an excellent way to explain/practice which works best with my studying style.

For my homepage, I used different types of HTML elements. Other than the prominent `<head></head>` tags, I used the `<body></body>` space for the header. There is no technical reason that led to doing this, but as a design result, the website gained a better outcome by doing. Another element is the `<div></div>`, which was used to define the classes so they could be in the CSS files for styling. Finally, the `<h1></h1>` tag was used for the title of the page, while the `<p></p>` was used for the description text on the home page. ``, ``, and `<a>` were used for the navigation bar. Due to the nature of the navigation bar, as it is a list but not ordered, the `` tag came in use and for specifying the elements on that list, I used `` tags. To create the hyperlink so the words shown in the navigator bar could take the user from one page to another, the `<a>` tags were used.

The CSS language used for this website was simple due to the lack of information on the subjects. Most of the CSS work was to adjust the placements and the sizes of the words, pictures, videos, and text in order to gain an appealing design. One interesting CSS element that is used in this website is "hover", which reflects a sense of movement in the website when scrolling on an element.

All images on the websites were taken by me using my iPhone. The people in the pictures gave me their verbal consent to be on the website. External sources were used for the font; you can find the URLs below:

-<https://kit.fontawesome.com/a6c2684590.js>

-<https://fonts.googleapis.com/css2?family=Nunito+Sans:wght@200;300;400;600;700&display=swap>

-<https://fonts.googleapis.com>

-<https://fonts.gstatic.co>

The website works on different browsers, such as Google Chrome and Firefox. Moreover, due to the website's responsive speciality, the layout changes depending on the screen size. The website works on examples of devices: 27-inch monitor, 16-inch laptop monitor, iPhone, Galaxy, and Kindle Linux device.

The validation of the CSS files can be shown in the appendix section.

The fonts used for the website are open source; as for the images, they are all taken by me.
